

# Don't Take Your Hands for Granted

## Hand injuries are preventable.

**70%** of workers don't wear hand protection.  
**30%** don't wear the right kind of glove.

**42%**  
of nonfatal  
occupational  
injuries

## Hand injuries are costly.

Hand injuries can cost from **\$540 to \$26,000**.  
*(National Safety Council)*

**involved  
hands  
in 2017.**

## You're part of the solution.

**1.** Wear hand protection! **2.** Wear the proper type of glove for the work you're doing. **3.** Wear the right size — a glove won't help if it doesn't fit.

## Know your gloves.

Gloves are classified to a performance **level ranging from 0 to 9**. Always ensure your selected glove complies with the mandated safety standard recommendation for your application.

## Employers: Use ANSI/SEA standards.

The International Safety Equipment Association (ISEA) has standards for making sure gloves perform properly. Visit <https://safetyequipment.org> and click on Standards.
