

# ASSESS WORKPLACE HAZARDS

**To determine necessary first aid supplies at your workplace.**

To determine minimum requirements for first aid kits appropriate to your work environment, first conduct a thorough workplace hazard assessment.

**There are many ways to conduct a workplace hazard assessment, but here are three guiding questions to determine which supplies to augment your first aid kits with:**

**What are the hazards that exist?**

**What kinds of injuries have occurred or could occur in relation to these hazards?**

**What types of first aid supplies are needed to treat these injuries?**

**All workplaces are unique, and therefore making additions to minimum requirements should take place to reflect the unique hazards and injuries that could occur in the workplace.**

**Workplace First Aid Kits should be updated to conform to the new ANSI/ISEA Z308.1-2021 by October 15, 2022.**
